

Water/Wastewater Project Manager

Little Rock, Arkansas

Fayetteville, Arkansas

\$110,000-\$160,000 // Relocation Assistance

Are you an experienced project manager with proven background overseeing large, complex water/wastewater projects throughout South or Mid-West Regions looking for a water/ wastewater focused consulting firm? If so, then this could be the perfect role for you!

About the Company:

Crist Engineers, Inc. (Crist), founded in 1938, is one of the oldest and most established consulting firms in Arkansas that specializes in the planning, design, construction administration, construction observation, startup, and operations assistance of municipal water supply, treatment, distribution and storage improvements, as well as wastewater permitting, collection, conveyance, treatment, and disposal improvements. When requested, Crist Engineers also provides general civil engineering, surveying, public works, electrical, instrumentation and controls, telemetry, solid waste, and energy related services. Crist has effectively demonstrated this commitment to the municipal market by maintaining a base of repeat recurring clients, serving many continuously for over 60 years.

Crist provides employees with competitive compensation, paid time off, health insurance, dental insurance, flex time, and matching 401(k) plan.

The role will include:

- **Manage a variety of existing and potential projects, with the ability to oversee full end to end process of large complex projects including proposals, scope, schedule, budget, deliverables, etc.**
- **Interface with clients, state and federal agencies and subconsultants to execute projects**
- **Develop project deliverables independently and/ or coordination of engineering disciplines in a highly collaborative team environment**
- **Solve complex problems, providing technical evaluation, and evaluate costs and benefits of alternative solutions for clients**
- **Mentor and develop less experienced/junior engineering professionals, establishing growth opportunities and building project delivery teams**
- **Support office and firm leadership in marketing and pursuit focuses primarily on municipal clients**

Minimum Required Education, Certification and Experience

- **Bachelor's degree in civil or environmental engineering or related engineering field**
- **Minimum eight years of relevant experience in consulting engineering in the municipal water/wastewater industry with the ability to develop and nurture existing municipal/private client relationships**
- **Proficiency in communicating technical information**
- **Effective verbal and written communication skills**
- **Licensed Professional Engineer**
